01 PROFILE

University Technician in Programming (UTN, graduated July 2026). I like making people's daily work more practical, and programming is how I do it. I built a complete management system, with a desktop app and mobile access, that a store uses every day. I am also co-founder of FS Labs, where I design and build websites for clients. I come from remote sales, customer service and community management. I am looking for my first IT job.

02 PROJECTS

FRESKA Gestión — IN REAL USE

Electron · Node.js · SQLite · PWA

Personal project · management system with a desktop app and mobile access (PWA)

I designed and built it end to end for a store. It replaced the notebook, the calculator and the Excel file used to run the whole business: orders, invoices, payments and customer accounts, checks, expenses, cash register, suppliers, stock, commissions, statistics and reports. The administrator uses it every day, from the computer and from the phone, on the same database. I built it with the real user.

- Migrated the data from an Excel file to a relational database (SQLite) with business rules; user login, roles and permissions, and voids with a mandatory reason that notify the administrator.
- Custom Node server (HTTP API, cookie sessions, role-based permissions, concurrency control) sharing its logic with the desktop app, and a PWA for the phone.
- Automated tests for money and stock (30+ files): 250 random operations across 8 seeds and 20 simultaneous payments never exceeding the balance.
- Migrations tested on copies of the database before being applied; Windows installer, published versions, backups and a built-in user manual.

Code: github.com/sofigarnier1/freska-gestion

FS Labs · Alinea Desarrollos — REAL CLIENT

Next.js · TypeScript · Tailwind

Co-founder · automation, AI and custom software agency · fslabs.com.ar

- Design, frontend and copy of the FS Labs website (Next.js, TypeScript, Tailwind, Framer Motion), in Spanish and English.
- Frontend of the corporate website, investor portal and admin panel of Alinea Desarrollos (a construction company), with end-to-end tests (Playwright), delivered and in production: alineadesarrollos.com.ar. The CRM and the automation flows were built by my partner.

Team of two; repository in Azure DevOps.

Academic projects

React · Java · SQL

Sabina Accesorios (group e-commerce, React/Node/Express/MongoDB): my part was the frontend, the visual decisions and one REST API route with Express. *github.com/lucasperinotto/ecommerce-university-project* **WMS** (Java, relational database): stock movements and traceability. **Northwind**: SQL queries.

03 EXPERIENCE

Co-founder and frontend developer · FS Labs

2026 — Present

Automation, AI and custom software agency · fslabs.com.ar

Design, frontend and copy of the website (Next.js, TypeScript, Tailwind CSS, Framer Motion), in Spanish and English. Frontend of the corporate website, investor portal and admin panel of Alinea Desarrollos, with end-to-end tests, in production. The CRM and the automation flows are developed by my partner.

Community Manager and Content Creator

2022 — Present

Freelance · hybrid

For clothing stores, a medical office and a pool business: strategy and calendar, photo and video, editing (Canva, CapCut), publishing with Meta Business Suite and Meta Ads campaigns, answering messages and analyzing metrics. AI for ideas and copy (Claude) and for images and video (Gemini, ChatGPT).

Customer Service

2023 — 2026

Men's clothing store · serving and advising customers, payments, cash register, restocking, exchanges and returns

B2B Sales and Customer Success · remote
